

The logo is centered within a large white circle, which is itself set against a solid lime green background. A dotted pink line forms a circle just inside the white circle's border. The word "Cherish" is written in a black, elegant script font. The letter "i" is replaced by a vertical green bar. A pink flower with eight petals and a white center is positioned above the green bar. Below the word "Cherish", the words "Heart of Skincare" are written in a small, black, sans-serif font.

SKIN CARE

We stock a selection of exclusive, high-performance product lines.
Our expert staff can give you recommendations for the perfect products for your particular needs.

A medically based product that provides an advanced anti-aging solution. Formulated by a plastic surgeon originally to treat and heal severe burn wound victims, this treatment is fast becoming an industry trend. The combination of pure ingredients and extensive research produce a product which fights all the 7 signs of ageing. With Optiphi, less is more!

An organic skincare range sourced from wild African plants that offer excellent free-radical protection. Esse is certified organic by Ecocert France, accredited by PhytoTrade Africa and supports the Fair Trade movement. The founders of Esse believe it's possible to be successful without compromising on ethics. A simple philosophy: "We do everything that we can to get our client's skin healthy and resistant to the ageing process. We take a long-term view on skin health and don't make sacrifices for short-term results."

Biomedical Emporium® skin care products are formulated by a Biomedical Scientist to ensure safe, effective and high-quality skin care. All the Biomedical Emporium® products comprise of the very unique and explicit tertiary tissue-protective peptide technology synthesised by Dr Judey Pretorius. From basic peels to advanced microneedling, Biomedical can assist with all skin types and conditions from pigmentation, sunspots, acne and acne scarring, ice pick scarring, fine lines and wrinkles.

HydraFacial™

A HydraFacial is a patented skin treatment available in medical spas and dermatology offices. It's also sometimes called "hydradermabrasion" because it involves microdermabrasion-like exfoliation paired with hydrating serums.

Known for its three-step process, the HydraFacial works to deep-clean, exfoliate, and hydrate your skin. This professional procedure may help treat a variety of skin conditions, including acne, dryness, and wrinkles.

LASER

Diode lasers use a single wavelength of light that has a high absorption rate in melanin. As the melanin heats up it destroys the root and blood flow to the follicle disabling the hair growth permanently. Diode lasers deliver high frequency, low fluence pulses and can be safely used on all skin types.

NAIL CARE

NAIL CARE

Regular, professional nail care ensures that your nails stay strong so they can do the job.

The central reason for booking a manicure and pedicure appointment with a professional manicurist is to change, enhance, or maintain the look of your nails. There are many different options when it comes to personalizing the aesthetic of your fingernails and/or toenails.

WEIGHT LOSS

Why choose HIEMT PRO?

EMS Body Contouring High Intensity Pulsed Electromagnetic (HiPEM) technology for body slimming, firming

and fat burning. EMS Body Contouring builds muscle and burns fat at the same time. Electromagnetic pulses induce supra-maximal muscle contractions which force muscle tissue to adapt, leading to an increase in muscle growth while burning fat through lipolysis.

How does it work?

Using HI-EMT (High Energy Focused Electromagnetic Wave Technology) to continuously expand and contract autologous muscles and carry out extreme training to deeply reshape the internal structure of the muscle, that is, the growth or muscle fibrils (muscle enlargement) and produce new protein chains and muscle fibres (muscle hyperplasia), so as to train an increase muscle density and volume. The 100% extreme muscle contraction of HI-EMT technology can trigger a large amount of fat decomposition, fatty acids are broken down from triglycerides and accumulated in fat cells. The concentrations of fatty acids are too high, causing the fat cells to apoptosis, which is excreted by the body's normal metabolism within a few weeks therefore strengthening and increasing muscle, and reduce fat at the same time.

In the 30-minute course of treatment, the muscles contract 20,000 times with high frequency and high intensity. This type of muscle contraction phenomenon cannot be achieved in general exercise! Extreme muscle contraction requires a large amount of energy supply, so the fat cells next to the muscle are also consumed, leading to natural apoptosis and effectively reducing fat thickness.
